TABLE OF CONTENTS

CHAPTER 1. INTRODUCTION

1.1. Project Background and Motivation

1.1.1. The Digital Transformation of the Cinema Industry
1.1.2. The Online Movie Discovery and Ticket Booking Landscape
1.1.3. Motivation for Developing CineHub

1.2. Problem Statement

1.2.1. Fragmented Movie Information and Showtime Discovery
1.2.2. Inefficient Navigation Between Movies, Cinemas and Showtimes
1.2.3. Seat Availability and Booking Consistency Challenges
1.2.4. Trust, Transaction Transparency and User Experience
1.2.5. Limitations of Existing Approaches and the Need for Integration

1.3. Project Objectives

1.3.1. General Objective
1.3.2. Functional Objectives
1.3.3. Technical and Architectural Objectives
1.3.4. Security, Reliability and Performance Objectives
1.3.5. User Experience Objectives

1.4. Project Scope and Limitations

1.4.1. Target Users and Stakeholders
1.4.2. Core Functional Scope
1.4.3. Technical Scope
1.4.4. Business and Operational Assumptions
1.4.5. Project Constraints and Limitations
1.4.6. Out-of-Scope Features and Future Extensions

1.5. Research and Development Methodology

1.5.1. Requirements Elicitation and Analysis
1.5.2. Iterative Software Development Approach
1.5.3. System Modeling and Architecture Design
1.5.4. Implementation and Integration Strategy
1.5.5. Testing and Empirical Evaluation

1.6. Project Deliverables and Expected Contributions

1.6.1. Functional Web Application
1.6.2. Backend API and Database System
1.6.3. Technical Documentation and API Contract
1.6.4. Testing Results and Evaluation Artifacts

CHAPTER 2. THEORETICAL BACKGROUND AND RELATED SYSTEMS

2.1. Online Cinema Ticketing Systems

2.1.1. Core Concepts and Business Models
2.1.2. Movie, Cinema, Auditorium and Showtime Relationships
2.1.3. The Online Ticket Booking Lifecycle
2.1.4. Stakeholders and Business Rules in Cinema Ticketing

2.2. Requirements Engineering and Business Process Modeling

2.2.1. Functional and Non-Functional Requirements
2.2.2. Use Case Modeling and Actor Relationships
2.2.3. Business Process Model and Notation (BPMN)
2.2.4. Data Flow Diagrams (DFD)
2.2.5. UML Sequence and Class Diagrams

2.3. Web Application Architecture

2.3.1. Client–Server Architecture
2.3.2. Separation of Presentation, Business Logic and Data Access
2.3.3. RESTful API Design Principles
2.3.4. Modular Backend Architecture and Separation of Concerns
2.3.5. API Validation, Error Handling and Versioning

2.4. Frontend Engineering with Angular

2.4.1. Component-Based Architecture
2.4.2. Routing, Services and Dependency Injection
2.4.3. Reactive Forms and Client-Side Validation
2.4.4. HTTP Client and HTTP Interceptors
2.4.5. Route Guards and Frontend State Management

2.5. Backend Engineering with Node.js and Express

2.5.1. Request–Response Lifecycle
2.5.2. Middleware and Route Organization
2.5.3. Business Service and Data Access Layers
2.5.4. Asynchronous Processing and Exception Handling

2.6. Relational Database Design and ORM

2.6.1. Relational Data Modeling and Normalization
2.6.2. Primary Keys, Foreign Keys and Referential Integrity
2.6.3. Transaction Processing and ACID Properties
2.6.4. Database Indexing and Query Optimization
2.6.5. Prisma ORM and Schema Management

2.7. Caching, Concurrency and Temporary Resource Reservation

2.7.1. Caching Fundamentals and Redis
2.7.2. Time-to-Live (TTL) and Temporary Seat Holds
2.7.3. Race Conditions and Concurrent Booking Requests
2.7.4. Atomic Operations and Data Consistency
2.7.5. Idempotency in Booking and Payment Workflows

2.8. Authentication, Authorization and Web Security

2.8.1. Authentication versus Authorization
2.8.2. Access Tokens and Refresh Tokens
2.8.3. Angular HTTP Interceptor and Token Lifecycle
2.8.4. Role-Based Access Control (RBAC)
2.8.5. Password Security, Cookie Security and CSRF
2.8.6. CORS, Input Validation and Common Web Vulnerabilities

2.9. Payment Processing and Transaction Integrity

2.9.1. Online Payment Workflow
2.9.2. Payment Status and Order Status Management
2.9.3. Payment Callbacks, Webhooks and Signature Verification
2.9.4. Duplicate Requests, Failed Payments and Reconciliation
2.9.5. Payment Gateway Integration Constraints

2.10. AI-Assisted Movie Discovery and Conversational Systems (nếu thuộc phạm vi triển khai)

2.10.1. Conversational Interfaces in Digital Services
2.10.2. Large Language Models and Structured Data Retrieval
2.10.3. Retrieval-Augmented Generation (RAG) Fundamentals
2.10.4. Grounded Responses and Hallucination Mitigation
2.10.5. Evaluation of AI Response Quality and Reliability

2.11. Review of Existing Cinema Platforms

2.11.1. Comparative Review of Selected Platforms
2.11.2. Functional Comparison of Movie Discovery and Booking

2.11.3. Comparison of User Experience and Booking Workflows
2.11.4. Identified Opportunities for CineHub

2.12. Chapter Summary

CHAPTER 3. SYSTEM ANALYSIS AND PROPOSED DESIGN

3.1. Project Development Process

3.1.1. Requirement Collection and Stakeholder Analysis
3.1.2. Requirement Prioritization and Scope Definition
3.1.3. System Modeling and Design Workflow
3.1.4. Implementation and Validation Plan

3.2. Stakeholder and Actor Identification

3.2.1. Guest User
3.2.2. Registered Customer
3.2.3. Administrator
3.2.4. Cinema or Showtime Data Provider (nếu có trong mô hình vận hành)
3.2.5. External Payment Provider
3.2.6. External AI Service (nếu được sử dụng)

3.3. Functional Requirements Specification

3.3.1. User Registration, Login and Account Management
3.3.2. Movie Catalog and Movie Detail Management
3.3.3. Cinema Discovery and Showtime Search
3.3.4. Showtime Selection and Seat Map Visualization
3.3.5. Temporary Seat Reservation and Booking Creation
3.3.6. Order Confirmation and Payment Processing
3.3.7. Electronic Ticket Issuance and Booking History
3.3.8. Administrative Management Functions
3.3.9. AI-Assisted Discovery and Support (nếu triển khai)

3.4. Non-Functional Requirements

3.4.1. Performance and Response Time
3.4.2. Security and Privacy
3.4.3. Reliability and Data Consistency
3.4.4. Scalability and Maintainability
3.4.5. Usability and Accessibility
3.4.6. Compatibility and Deployment Requirements

3.5. Business Rules and System Constraints

3.5.1. Movie and Showtime Validity Rules
3.5.2. Seat Availability and Reservation Rules
3.5.3. Seat-Hold Expiration Rules
3.5.4. Order and Payment State Transitions
3.5.5. Ticket Issuance and Cancellation Rules
3.5.6. Administrative Permissions and Data Integrity

3.6. Use Case Modeling

3.6.4. Seat Selection and Booking Use Cases
3.6.5. Payment and Ticket Management Use Cases
3.6.6. Administration Use Cases
3.6.7. Detailed Use Case Specifications for Critical Workflows

3.7. Business Process Modeling (BPMN)

3.7.1. User Registration and Authentication Process
3.7.2. Movie Discovery and Showtime Selection Process
3.7.3. Seat Selection and Temporary Reservation Process
3.7.4. Booking, Payment and Ticket Issuance Process
3.7.5. Booking Expiration and Failed Payment Process
3.7.6. Administrative Movie and Showtime Management Process

3.8. Data Flow Diagram (DFD)

3.8.1. Context Diagram (Level 0)
3.8.2. Level 1 DFD: Authentication and User Management
3.8.3. Level 1 DFD: Movie and Showtime Discovery
3.8.4. Level 1 DFD: Booking and Payment
3.8.5. Level 1 DFD: Ticket and Booking History
3.8.6. External Systems and Data Store Interactions

3.9. Chapter Summary

CHAPTER 4. SYSTEM DESIGN

4.1. Proposed System Architecture

4.1.1. High-Level System Architecture
4.1.2. Angular Presentation Layer
4.1.3. Express API and Business Logic Layer
4.1.4. Relational Persistence Layer with MySQL and Prisma
4.1.5. Redis Caching and Temporary Seat Reservation
4.1.6. External Service Integration Layer

4.1.7. Request Lifecycle and Component Communication
4.1.8. Architectural Rationale and Technology Selection

4.2. API Contract and Integration Design

4.2.1. API Naming Conventions and Versioning
4.2.2. Request and Response Format
4.2.3. Authentication and Authorization Requirements
4.2.4. Standard Error Response Structure
4.2.5. Pagination, Filtering and Sorting Conventions
4.2.6. Idempotency and Duplicate Request Handling
4.2.7. API Contract for Booking and Seat Reservation
4.2.8. API Contract for Payments and Ticket Issuance
4.2.9. Frontend–Backend Integration Matrix

4.3. Database Design

4.3.1. Database Design Principles
4.3.2. Conceptual Data Model
4.3.3. Entity–Relationship Diagram (ERD)
4.3.4. Logical Relational Schema
4.3.5. Core Entity Definitions and Relationships
4.3.6. Constraints, Indexes and Referential Integrity
4.3.7. Prisma Schema and ORM Mapping
4.3.8. Redis Data Structures and TTL Strategy
4.3.9. Data Lifecycle and Consistency Considerations

4.4. UML Sequence Diagrams

4.4.1. Registration and Login
4.4.2. Access Token Refresh and Session Recovery
4.4.3. Movie and Showtime Search
4.4.4. Seat Map Retrieval and Seat Hold
4.4.5. Booking Creation and Payment Initiation
4.4.6. Payment Confirmation and Ticket Issuance
4.4.7. Booking Timeout and Seat Release
4.4.8. Administrative Movie and Showtime Updates

4.5. Critical Algorithm and State Modeling

4.5.1. Seat Availability and Seat-Hold Algorithm
4.5.2. Concurrent Booking Conflict Prevention
4.5.3. Booking and Payment State Machine
4.5.4. Payment Idempotency and Duplicate Callback Handling
4.5.5. Ticket Generation and Verification Logic

4.5.6. AI Retrieval and Response Workflow (nếu triển khai)

4.6. Chapter Summary

CHAPTER 5. USER INTERFACE AND USER EXPERIENCE DESIGN

5.1. UI/UX Design Principles

4.1. UI/UX Design Principles

5.1.1. Design Goals and Target Audience
5.1.2. Visual Identity and Brand Direction
5.1.3. Color System, Typography and Iconography
5.1.4. Layout Consistency and Design System
5.1.5. Responsive Design and Accessibility
5.1.6. User Feedback, Loading States and Error Prevention

5.2. Information Architecture and Navigation

5.2.1. Sitemap and Page Hierarchy
5.2.2. Global Navigation and Header Design
5.2.3. User Journey Mapping
5.2.4. Navigation Between Movies, Cinemas and Showtimes

5.3. Authentication and Account Interfaces

5.3.1. User Registration Interface
5.3.2. Login Interface
5.3.3. Email or OTP Verification Interface (nếu triển khai)
5.3.4. Forgot Password and Password Reset
5.3.5. Account Profile and Session Management

5.4. Homepage and Movie Discovery

5.4.1. Homepage Layout and Hero Section
5.4.2. Now Showing and Coming Soon Sections
5.4.3. Featured Movies and Genre Navigation
5.4.4. Movie Cards and Information Hierarchy
5.4.5. Search, Filtering and Sorting Interfaces

5.5. Movie Details and Showtime Discovery

5.5.1. Movie Detail Page
5.5.2. Synopsis, Cast, Genre and Movie Metadata
5.5.3. Cinema Selection Interface

5.5.4. Showtime Listing and Date Selection
5.5.5. Filtering Showtimes by Cinema, Date and Format

5.6. Seat Selection and Reservation Interface

5.6.1. Showtime Confirmation
5.6.2. Auditorium Layout and Seat Map
5.6.3. Seat Types, Availability and Status Indicators
5.6.4. Selected Seats and Booking Summary
5.6.5. Reservation Countdown and Hold Expiration
5.6.6. Concurrent Seat Selection and Conflict Feedback

5.7. Booking and Payment Interfaces

5.7.1. Booking Review and Price Breakdown
5.7.2. Customer Information and Order Confirmation
5.7.3. Payment Method Selection
5.7.4. Payment Pending, Success and Failure States
5.7.5. Payment Retry and Recovery Flow

5.8. Electronic Ticket and Booking Management

5.8.1. Booking Confirmation Page
5.8.2. Electronic Ticket Detail
5.8.3. QR Code Display and Ticket Verification (nếu triển khai)
5.8.4. Booking History
5.8.5. Ticket Status and Cancellation Information

5.9. User Profile and Personalized Features

5.9.1. Profile Management
5.9.2. Booking History and User Preferences
5.9.3. Favorite Movies or Watchlist (nếu triển khai)
5.9.4. Personalized Recommendations (nếu triển khai)

5.10. Administrative Dashboard

5.10.1. Dashboard Overview
5.10.2. Movie Management
5.10.3. Cinema, Auditorium and Showtime Management
5.10.4. Booking and Order Management
5.10.5. User and Role Management
5.10.6. Validation, Confirmation and Error States

5.11. AI Chatbot Interface (nếu triển khai)

5.11.1. Chat Interface and User Interaction
5.11.2. Movie Discovery Through Natural Language
5.11.3. Showtime and Cinema Information Retrieval
5.11.4. Suggested Prompts and Contextual Responses
5.11.5. Fallback Responses and AI Limitations

5.12. Usability Evaluation

5.12.1. Task-Based Usability Scenarios
5.12.2. Navigation and Interaction Consistency
5.12.3. Identified Usability Issues and Improvements

5.13. Chapter Summary

CHAPTER 6. SYSTEM IMPLEMENTATION, INTEGRATION AND TESTING

6.1. Development Environment and Technology Stack

5.1. Development Environment and Technology Stack

6.1.1. Development Tools and Runtime Environment
6.1.2. Angular Frontend Implementation
6.1.3. Node.js and Express Backend Implementation
6.1.4. MySQL and Prisma ORM Configuration
6.1.5. Redis Integration
6.1.6. External Services and Environment Configuration
6.1.7. Version Control and Development Workflow

6.2. Codebase Organization and Modular Design

6.2.1. Frontend Directory Structure
6.2.2. Backend Directory Structure
6.2.3. Separation of Routes, Controllers, Services and Repositories
6.2.4. Shared Types, DTOs and Validation Schemas
6.2.5. Configuration Management and Environment Variables
6.2.6. Error Handling and Logging Strategy

6.3. Authentication and Authorization Implementation

6.3.1. Registration and Login API
6.3.2. Password Hashing and Credential Validation
6.3.3. Access Token and Refresh Token Lifecycle
6.3.4. Angular HTTP Interceptor Implementation
6.3.5. Token Refresh Coordination and Request Retry
6.3.6. Route Guards and Backend Authorization Middleware

6.3.7. Role-Based Access Control
6.3.8. Logout and Session Revocation

6.4. Movie Catalog and Showtime Implementation

6.4.1. Movie Data Management
6.4.2. Movie Listing, Search and Filtering
6.4.3. Cinema and Auditorium Management
6.4.4. Showtime Creation and Retrieval
6.4.5. Data Validation and Query Optimization

6.5. Seat Reservation and Booking Engine

6.5.1. Seat Map Retrieval
6.5.2. Seat Availability Validation
6.5.3. Temporary Seat Holds Using Redis
6.5.4. Hold Expiration and Seat Release
6.5.5. Booking Creation and Database Transactions
6.5.6. Concurrent Booking Conflict Prevention
6.5.7. Price Calculation and Order Validation
6.5.8. Booking State Transitions and Recovery

6.6. Payment and Ticket Processing

6.6.1. Payment Initiation and Order Association
6.6.2. Payment Gateway Integration
6.6.3. Payment Callback or Webhook Processing
6.6.4. Signature Verification and Payment Status Validation
6.6.5. Idempotent Payment Processing
6.6.6. Ticket Issuance After Confirmed Payment
6.6.7. Failed Payment, Timeout and Recovery Handling
6.6.8. Booking History and Ticket Retrieval

6.7. Database Persistence and Data Integrity

6.7.1. Prisma Schema Implementation
6.7.2. Database Migrations and Seed Data
6.7.3. Relational Constraints and Indexes
6.7.4. Transaction Boundaries and Rollback Behavior
6.7.5. Redis Key Design, TTL and Cache Invalidation
6.7.6. Data Consistency Between Booking and Payment Records

6.8. API Implementation and Frontend Integration

6.8.1. REST API Route Implementation
6.8.2. Request Validation and Response Serialization

6.8.3. Standardized Error Responses
6.8.4. Angular API Services and Typed DTOs
6.8.5. Loading, Empty, Success and Error States
6.8.6. API Documentation and Contract Conformance
6.8.7. Integration Testing Between Frontend and Backend

6.9. AI-Assisted Features Implementation (nếu triển khai)

6.9.1. AI Service Architecture and Model Integration
6.9.2. Movie Data Retrieval and Context Preparation
6.9.3. Prompt Design and Response Generation
6.9.4. Grounded Answers and Out-of-Scope Handling
6.9.5. Error Handling, Latency and Usage Constraints
6.9.6. AI Response Quality Evaluation

6.10. Testing Strategy

6.10.1. Test Plan and Test Environment
6.10.2. Unit Testing
6.10.3. API and Integration Testing
6.10.4. End-to-End Testing
6.10.5. Authentication and Authorization Testing
6.10.6. Seat Reservation and Concurrency Testing
6.10.7. Payment Workflow Testing
6.10.8. Security and Input Validation Testing
6.10.9. Performance and Load Testing
6.10.10. Regression Testing

6.11. Deployment and Operational Configuration

6.11.1. Frontend and Backend Deployment Architecture
6.11.2. Database and Redis Deployment
6.11.3. Environment Variables and Secret Management
6.11.4. HTTPS, CORS and Production Configuration
6.11.5. Logging, Health Checks and Error Monitoring
6.11.6. Deployment Limitations and Operational Considerations

6.12. Chapter Summary

CHAPTER 7. RESULTS, EVALUATION AND CONCLUSION

Chương cuối cần trả lời ba câu hỏi: CineHub đã hoàn thành những gì, kết quả có đáp ứng mục tiêu ban đầu không, và những hạn chế nào vẫn còn tồn tại?

Chương cuối cần trả lời ba câu hỏi: CineHub đã hoàn thành những gì, kết quả có đáp ứng mục tiêu ban đầu không, và những hạn chế nào vẫn còn tồn tại?

7.1. Implemented System Overview

7.1.1. Summary of Implemented Modules
7.1.2. Final Application Interface
7.1.3. Completed Business Workflows
7.1.4. Administrative Capabilities
7.1.5. Integration with External Services

7.2. Functional Testing Results

7.2.1. Authentication and Account Management Results
7.2.2. Movie and Showtime Discovery Results
7.2.3. Seat Selection and Booking Results
7.2.4. Payment and Ticket Issuance Results
7.2.5. Administrative Function Results
7.2.6. AI Feature Results (nếu triển khai)

7.3. Reliability and Data Consistency Evaluation

7.3.1. Seat-Hold Expiration Validation
7.3.2. Concurrent Booking Conflict Tests
7.3.3. Duplicate Payment Callback Tests
7.3.4. Failed Payment and Recovery Tests
7.3.5. Booking and Ticket State Consistency

7.4. Performance Evaluation

7.4.1. Test Environment and Experimental Setup
7.4.2. API Response Time Measurements
7.4.3. Database Query Performance
7.4.4. Seat Reservation Under Concurrent Requests
7.4.5. Cache Effectiveness and Redis Behavior
7.4.6. Performance Bottlenecks and Optimization Opportunities

7.5. Security Evaluation

7.5.1. Authentication and Token Lifecycle Tests
7.5.2. Role-Based Access Control Tests
7.5.3. Input Validation and Error Handling
7.5.4. Payment Callback Validation
7.5.5. Sensitive Data Protection
7.5.6. Remaining Security Risks

7.6. Evaluation Against Project Objectives

7.6.1. Functional Requirements Coverage
7.6.2. Non-Functional Requirements Coverage
7.6.3. Technical Objectives Achievement
7.6.4. Unimplemented Requirements and Deviations
7.6.5. Comparison Between Expected and Actual Results

7.7. Discussion

7.7.1. Architectural Strengths
7.7.2. Critical Technical Challenges and Resolutions
7.7.3. Business Value and User Experience Implications
7.7.4. Limitations of the Current Implementation
7.7.5. Lessons Learned During Development

7.8. Conclusion and Future Development

7.8.1. Summary of Project Contributions
7.8.2. Achievement of the Main Objectives
7.8.3. Future Improvements to Booking and Payment
7.8.4. Scalability and Operational Enhancements
7.8.5. Potential AI and Personalization Extensions

7.9. Final Conclusion

REFERENCES

- Academic papers and books related to software engineering, information systems, databases and web security.
- Official documentation for Angular, Node.js, Express, MySQL, Prisma and Redis.
- Official documentation for any payment provider and AI service actually integrated.
- Sources used in the review of existing cinema platforms.
- Sources must be cited consistently using the citation style required by the course or supervisor.

APPENDICES

Appendix A. Detailed Functional and Non-Functional Requirements

Appendix B. Complete Use Case Specifications

Appendix C. Full API Contract and Endpoint Inventory

Appendix D. Database Schema, ERD and Data Dictionary

Appendix E. Additional BPMN, DFD and UML Diagrams

Appendix F. Test Cases and Test Execution Results

Appendix G. Selected Implementation Details and Code Snippets

Appendix H. Deployment and Configuration Guide

Appendix I. User Manual and Administrative Manual

Appendix J. Project Schedule, Task Allocation and Contribution Records (nếu báo cáo nhóm yêu cầu)
